

AI Claim Check Card

Before accepting an impressive AI claim, ask six questions.

1

Who is saying it?

A paper, institution, company, journalist or anonymous account?

2

What is the primary evidence?

Find the paper, dataset, model card, official document or original announcement.

3

What does it actually show?

A narrow result is not a broad conclusion.

4

When was it published?

In AI, current information ages quickly.

5

Is there independent confirmation?

A product description is not the same as independent evaluation.

6

What remains unknown?

Good documentation names uncertainty instead of hiding it.
